

**Abstract**

The invention relates to a method for data processing device exchanging data with computer, including: a computer sends a enquiring message of the device's type to the data processing device; after receiving the message, the control module sends the information about the device's type of the data processing device, informs the computer that the data processing device is the device with auto-run function or is the device without auto-run function; if the device's type information indicates that the data processing device is the device with auto-run function, then the device attribute of the data processing device's is set to the device with auto-run function, and the data processing device is accessed according to the corresponding access specifications, if there is the auto-running file in the data processing device, then the auto-run function is performed according to the script in the auto-running file, else the operation on the data processing device is finished, or else the device attribute of the data processing device is set to the device without auto-run function; by using the invention it can realize the data processing device automatically exchanging data with computer, and the exchanged data can be defined by user.
